

High temperature flow cell #1

Beamline: BXDS

Contact: Beatriz Diaz Moreno

Provides sample temperatures up to 1070 K (+800 °C) with gas flow. Samples are in the capillary format. Quartz capillaries are available at the BXDS beamlines.

The cell is based on the popular P. Chupas design. More information can be found in P. J. Chupas et al., J. Appl. Cryst. 41, 822 (2008).
